

DURAPRO®

AW2300

Woodworker's Yellow Glue

DURA PRO AW2300 is an aliphatic resin adhesive with superior characteristics designed for high quality woodworking. AW 2300 has excellent wet tack for faster gripping action and less slippage during clamping. It allows alignment of pieces and forms strong and durable bonds on hardwoods, softwoods, plywood, hardboard and other porous materials (not recommended for exotic wood). When dry, AW2300 is resistant to lacquers, paints and varnishes. AW2300 resists softening heat generated by sanding and cutting.
